

## TEMPUS 600 - Timedico

**TEMPUS 600®**  
The fastest pipe for clinical samples

### The swiftest blood transportation system

Laboratory technicians, orderlies and nurses no longer need to spend time transporting blood samples on trolleys from the patient to the laboratory. Instead, they may fully concentrate on their primary tasks, regardless whether these involve nursing or analysis.

They have the Tempus 600 blood transportation system to thank for this. Blood tests are transported in traditional test tubes via a pipe system direct to the laboratory; and since this conduit is dedicated to clinical samples, there is therefore no risk of delay, collision or erroneous delivery.

Tempus 600 is a product that Linattech has developed in partnership with Timedico. Linattech has been responsible for prototype development using its own testing facilities, performed production including FAT and has undertaken installations at hospitals. Linattech has also served as a sparring and development partner for new components and concepts.

The partnership between the two companies came about when Timedico was no longer able to cope with the development and production of machines. Daniel Blak, the director, therefore undertook an internal survey in an attempt to find a suitable partner. An employee, who had previously collaborated with Linattech and had favourable memories, drew his attention to them indicating that Linattech could solve tasks from drawings right up to the finished product.

#### FAKTA

300 metres in approx.  
30 secs.

Easy to install at all  
hospitals

Swift ROI

Engineer development

PLC development

"We chose Linattech because they could undertake the task from development, engineering, drafting until final production of the machines", says Daniel Blak.

Development occurred in partnership where both companies' range of services could be used at various instances in the process. The concept had been developed in Inventor, so that the necessary documentation was optimal and Linattech had also undertaken PLC programming.

"I definitely recommend Linattech, as they are adaptable and involve themselves wholeheartedly in the client's product. In fact I have several good
